

EXECUTIVE SUMMARY

e.sential Contract Guardian is your enterprise contract management tracking solution. It is designed to streamline your entire contract workflow process...from creation to completion. This Robust Solution is Simple to Use, Fast and Flexible. It is web-enabled and can be deployed on any operating system that runs a current web browser and handle thousands of users.

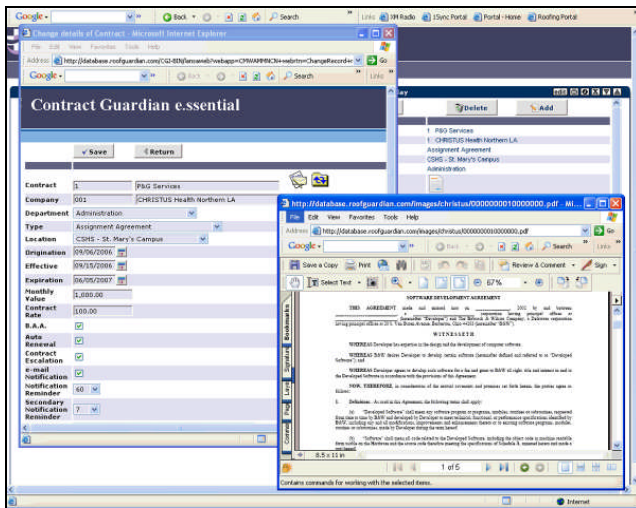

Overview

e.sential Contract Guardian is our solution specifically designed for your contract management department. Our approach is unique! We have included components of our e.sential application and incorporated your design specification to create e.sential Contract Guardian.

Our solution will meet 100% of your contract management needs...not 80% like most packages. The solution is 100% extendable.

Contract Guardian's main goal is to be easy to use and administer so training costs; implementation costs and administrator costs are minimized. Guardian's display screens are clean and uncluttered to make use easy and intuitive.

The application is designed to support the major platforms, databases and report writing tools available today. Guardian can be extended to incorporate additional functionality as it arises. Rippe & Kingston tailors our products to our client's requirements.

Software is Not Loaded on a user's PC!

Integrate Contract Guardian and Content

Contract Guardian is designed to provide access to a multitude of electronic resources, which include the complete range of information and services available to an organization.

The Single Sign-On feature means that a user only has to log into their environment once, and the infrastructure handles the user's credentials to all required/desired systems. This feature provides Ease of Use, Increased Security and Simplification of Administration.

Simplify Administration and Management

e.sential Contract Guardian management features make it easy for a single administrator or a group of administrators, each with specific responsibilities, to maintain and manage their respective contracts and users. Administrative controls are configurable, allowing administrators to implement appropriate policies and standards for the user interface, contracts, user and group management, and so on.
