

## I.T. Infrastructure & Development Services

Rippe & Kingston provides our clients with the peace of mind that their I.T. needs for both software and infrastructure are being served in the best way possible.

### Overview

#### I.T. Infrastructure Services Overview

Our Infrastructure Services are co-managed, meaning the customer holds the reigns and we pull the weight.

- 🌐 **Managed Services:** Help desk, managed networks, I.T. outsourcing, backup, remote monitoring & maintenance
- 🌐 **Security:** Reviews, design, assessment, remediation, maintenance and compliance, disaster recovery
- 🌐 **Wireless:** Design, assessment, implementation and maintenance of commercial grade wireless networks
- 🌐 **Structured Cabling:** Installations, additions and troubleshooting of network lines, audio/video, security (door & camera).
- 🌐 **Virtualization:** Capacity planning, DR solutions, virtual hosting, and VM clustering, business continuity

#### Software Design, Development & Management

Rippe & Kingston helps clients to attain their business goals by designing, developing, integrating and supporting mission critical applications and systems.

- 🌐 **Web Development:** Our team of web designers can create fanatics looking, unique websites and Blog themes. (Validated HTML, CSS, Google Analytics, SEO and automatic reporting)
- 🎨 **Enhance, Extend & Integrate:** ERP and home grown applications have been deployed over the past 25 years. ERP and custom applications have become the heart of many organizations and are now mission-critical. However, technology has progressed at such a rate that these systems now need to interoperate with newer systems and applications. Rippe & Kingston can Enhance, Extend and Integrate with almost any application on most platforms.
- 🛠️ **Custom Development:** Our Software architects will work with you and your team to develop your vision into a IT Reality. Interfaces include: Client Server, Smart Phone, Web (Browser Based) and Web Services (XML))
