FOR IMMEDIATE RELEASE

Rippe & Kingston Release Version 12.0 of METHOS 7x24 Plants and Facility Maintenance

Cincinnati, Ohio – February 2, 2009 – Rippe & Kingston Systems, Inc. With the need for greater efficiencies and cost savings high on executive agendas, superior maintenance management is emerging as a business imperative. The new release of METHOS™ significantly raises the bar in areas of Process Improvements and Integration with other systems.

Rippe & Kingston's Maintenance Management Solution latest release has special focus on simplifying the process at every step. For example: The new Quick Work Orders option(s) enable the creation of a detailed work order in under 30 seconds. This includes full definition of required trades and notes. It is accomplished through the use of a propriety template system generated for each client. According to Jud Springer, Assistant Maintenance Manager at U.S. Corrugated in South Carolina, "METHOS has dramatically simplified the process. The entire procedure is automated by their new template generation system in Version 12.0. We estimate a 70% time savings in the creation and documenting of all our work orders!"

While there are several products to provide maintenance management, METHOS's comprehensive offering with deep integration to ERP systems set it apart from the competition. "Because METHOS is bi-directionally integrated with your financials you'll gain an unprecedented ability to understand and control your maintenance expenditures" said Mike Albers, Managing Director of the METHOS Product Line.

Gerald Combs, Rippe & Kingston Systems, Inc. METHOS Lead Designer, said: "We are pleased by the reaction from our existing and prospective clients. The New Outlook Type of Frequency Scheduling for Preventative Maintenance is another feature that has really drawn attention. The scheduling approach is so real-world. How many firms have the luxury of scheduling simply by number of days frequency? What happens when it lands on the weekend, etc.? The new approach allows for options like the second Tuesday of each month or the first weekend day of each quarter."

About Rippe & Kingston Systems, Inc.

Rippe & Kingston has been providing sound technical and business solutions to clients for over 30 years. Their clients are located in 47 States and 9 Countries. METHOS is a comprehensive maintenance management system with installations world wide.
